Experience

Software Engineer, Amazon Account | Nestlé USA

Jun. 2025 – Present

- Architected **distributed microservices** processing catalog data across 470+ SKUs, improving PDP retention by 19%
- Built AWS Lambda and SQL services detecting pricing anomalies and 3P seller activity, reducing 12% of Buy Box losses
- Engineered telemetry pipelines for Stackline + Vendor Central, for **real-time monitoring**, driving 10% YoY growth
- Integrated LLM **inference services** into production analytics workflows, improving eCommerce forecast by 27%
- Crafted security dashboards for omnichannel campaign tracking with **Zero Trust LLM** attribution for senior leadership

Software Development Engineer | Magnamus Inc.

Jul. 2024 – Jun. 2025

- Optimized distributed data pipelines feeding AI agent workflows on **AWS Lambda**, reducing processing latency by 21%
- Established **FastAPI** and **PostgreSQL** services to ingest 20TB+ marketing data, reducing manual processing by 40%
- Refactored backend APIs integrating PyTorch pipelines, enabling real-time predictions across 5+ internal products
- Re-designed fault-tolerant pipelines with **CloudWatch** monitoring and observability, maintaining 99.9% reliability SLO

Software Developer | MemorialCare LBMC

Apr. 2024 – Jun. 2024

- Constructed **event-driven** data workflows using **Azure Functions**, reducing global compliance-processing time by 15%
- Produced async processing pipelines for **RAG/LLM** workloads, handling millions of patient records with high resiliency
- Designed data-centric alerting workflows for operational risk detection, recovery process, and incident visibility by 25%

Software Engineer | California State University Long Beach

May 2022 – Mar. 2024

- Adapted **React + Node.js** services with **SQL** to automate ERP data workflows, reducing data inconsistencies by 20%
- Linked Oracle PaaS APIs with CRM systems automating student data synchronizations, improving outreach by 30%
- Tailored Python-based real-time data pipelines to ingest Ops data for emergency-response planning and monitoring

Skills

- **Languages:** Python, Java, SQL, JavaScript, Go
- **Backend & Distributed Systems:** FastAPI, REST APIs, Microservices, Redis, SQS, Event-Driven Architecture
- **Cloud and Infrastructure:** AWS (Lambda, S3, EKS), Microsoft Azure, Kubernetes, Terraform, Git, CI/CD
- **Databases:** PostgreSQL, MySQL, SQL Server, MongoDB, Oracle, NoSQL, Snowflake
- **Observability:** CloudWatch, Azure Monitor, Distributed Monitoring and Alerting, Log Analytics
- **AI/ML:** LLM Agents, Harness Engineering, MCP, LangChain, PyTorch, RAG

Education

California State University Long Beach

Aug. 2021 – May. 2023

Master of Science in Computer Science

Long Beach, CA

Gujarat Technological University

Jul. 2016 – Aug. 2020

Bachelor of Technology in Computer Engineering

Ahmedabad, India

Projects

Agentic Commerce Intelligence

- Built **agentic platform** orchestrating multi-step workflows bridging 4+ products, reducing investigation time by 12%
- Developed **stateful planner-executor** tool, persistent memory and dynamic execution, automating 75% of workflows
- Engineered fault-tolerant execution with AWS, SQS, and Redis, supporting 12+ daily tool calls at **98% reliability**
- Enforced RBAC, **guardrails, tracing, and agent evals** across 5+ orthogonal scenarios, achieving 90% task success

Service Discovery System

- Orchestrated Consul-based **service discovery**, reducing service-resolution time by 50% with multi-zone redundancy
- Deployed **Kubernetes** services with Helm and Nginx reverse proxy, enabling reliable service-to-service communication
- Automated **multi-AZ** infra setup with **Terraform**, AWS EKS CDK, and **Ansible**, reducing provision time by 40%

Feature Prioritization Platform

- Fabricated Python services processing 1.2M+ user events to score feature impact and automate product prioritization
- Improved **A/B pipelines** across 3 product teams, increasing feature adoption by 22% through data-driven decisions
