Experience

Software Engineer, Amazon Account | Nestlé USA Jun. 2025 – Present

- Architected **distributed microservices** processing catalog data across 470+ SKUs, improving PDP retention by 19%
- Built AWS Lambda and SQL services detecting pricing anomalies and 3P seller activity, reducing Buy Box loss by 12%
- Engineered telemetry pipelines for Stackline and Vendor Central, enabling **real-time monitoring** and 10% YoY growth
- Integrated LLM **inference services** into production analytics workflows, improving eCommerce forecast by 27%
- Created security dashboards for omnichannel campaign tracking with **Zero Trust** attribution for senior leadership

Software Development Engineer | Magnamus Inc. Jul. 2024 – Jun. 2025

- Optimized distributed data pipelines feeding AI agent workflows with **Lambda**, reducing processing latency by 21%
- Built **FastAPI** and **PostgreSQL** services ingesting 20TB+ marketing data, reducing manual processing by 40%
- Engineered fault-tolerant pipelines with **CloudWatch** monitoring and observability, maintaining 99.9% reliability SLO
- Refactored backend APIs integrating PyTorch pipelines, enabling real-time predictions across 5+ internal products

Software Developer | MemorialCare LBMC Apr. 2024 – Jun. 2024

- Re-architected **event-driven** data workflows using **Azure** Functions, reducing compliance-processing time by 15%
- Built asynchronous processing pipelines for **RAG/LLM** workloads, handling millions of patient records with resiliency
- Developed event-driven alerting workflows for operational risk detection, improving incident visibility by 25%

Software Engineer | California State University Long Beach May 2022 – Mar. 2024

- Built **React** and **Node.js** services with **SQL** to automate ERP data workflows, reducing data inconsistencies by 20%
- Integrated Oracle PaaS APIs with CRM systems automating student data synchronizations, improving outreach by 30%
- Developed Python-based real-time data pipelines to ingest Ops data for emergency-response planning and monitoring

Skills

- **Languages:** Python, Java, SQL, JavaScript, Go
- **Backend & Distributed Systems:** FastAPI, REST APIs, Microservices, Redis, SQS, Event-Driven Architecture
- **Cloud and Infrastructure:** AWS (Lambda, S3, EKS), Microsoft Azure, Kubernetes, Terraform, Git, CI/CD
- **Databases:** PostgreSQL, MySQL, SQL Server, MongoDB, Oracle, NoSQL, Snowflake
- **Observability:** CloudWatch, Azure Monitor, Distributed Monitoring and Alerting
- **AI/ML:** LLM Agents, MCP, LangChain, PyTorch, Scikit-learn

Education

California State University Long Beach Aug. 2021 – May. 2023
Master of Science in Computer Science Long Beach, CA

Gujarat Technological University Jul. 2016 – Aug. 2020
Bachelor of Technology in Computer Engineering Ahmedabad, India

Projects

Agentic Commerce Intelligence

- Built an **agentic platform** orchestrating multi-step workflows across 4+ products, reducing investigation time by 12%
- Developed **stateful planner-executor** tool, persistent memory and dynamic execution, automating 75% of workflows
- Engineered fault-tolerant execution with AWS, SQS, and Redis, supporting 12+ daily tool calls at **98% reliability**
- Implemented RBAC, **guardrails**, **tracing**, and **agent evals** across 5+ scenarios, achieving 90% task success

Service Discovery System

- Built Consul-based service discovery on AWS EKS, reducing service-resolution time by 50% with multi-zone redundancy
- Deployed **Kubernetes** services with Helm and Nginx reverse proxy, enabling resilient service-to-service communication
- Automated **multi-AZ** infra provisioning with **Terraform**, AWS CDK, and **Ansible**, reducing provisioning time by 40%

Feature Prioritization Platform

- Built **Python** services processing 1.2M+ user events to score feature impact and automate product prioritization
- Designed **A/B pipelines** across 3 product teams, increasing feature adoption by 22% through data-driven decisions
