Experience

Software Engineer, Amazon Account | Nestlé USA Jun. 2025 – Present

- Architected **distributed microservices** ensuring catalog accuracy across 470+ SKUs, increasing 19% PDP retention
- Detected pricing discrepancies and 3P seller activity on Amazon using Lambda and SQL reducing **Buy Box** loss by 12%
- Delivered telemetry ingestion of Stackline + Vendor Central for **real-time sales monitoring**, driving 10% YoY growth
- Integrated **predictive analytics** LLM models into Power BI dashboards, improving 27% eCommerce forecast accuracy

Sr. Data and Platform Engineer | Magnamus Inc. Jul. 2024 – Jun. 2025

- Optimized ETL pipelines for AI agents using **AWS Lambda**, reducing data processing by 21% across GTM platforms
- Automated 20TB+ marketing data ingestion using **FastAPI** and **PostgreSQL**, cutting manual work by 40%
- Engineered **A/B** testing pipelines with **CloudWatch** alerts to ensure 99.9% reliability and rapid experimentation cycles
- Refactored internal APIs integrating PyTorch inference pipelines, enabling real-time predictions for 5+ internal products
- Created **Tableau** dashboards for omnichannel campaign tracking and **Zero Trust** security attribution for customers

Data Engineer | MemorialCare LBMC Apr. 2024 – Jun. 2024

- Re-architected patient data workflows using **Azure** Functions and Python, 15% reduction in compliance tracking
- Designed large-scale data message queues with RAG + LLMs, handling millions of records for 19% improved responses
- Developed AI-driven alert systems in **Power Automate**, improving operational risk detection and visibility by 25%

Software Engineer | Match4Action - CrowdDoing Jun. 2023 – Mar. 2024

- Unified real-time response pipelines in **SQL Server** and **Python** for emergency wildland fire data(100k+ records)
- Deployed model-driven sentiment analysis with NLP and **AWS S3** improving crisis response coordination by 35%

Software Engineer | California State University Long Beach May 2022 – May 2023

- Employed **SQL** with **React** and **Node.js** for data cleaning, resulting in 20% reduction in ERP data inconsistencies
- Enhanced outreach efficiency by 30% by integrating **Oracle PaaS** with CRM systems for accelerating student visibility

Jr. Application Developer | Dhyey Consulting Services Jun. 2020 – Aug. 2021

- Augmented delivery by 15% integrating **REST APIs** and developing predictive components to drive business alignment
- Implemented **CI/CD** pipelines using GitHub Actions, accelerating deployments upto 30% through Agile/Scrum SDLC

Skills

- **Programming Languages:** Python(Numpy, Pandas, Scikit-Learn), Java, SQL, JavaScript, Go
- **Cloud and DevOps:** Microsoft Azure, Snowflake, AWS (Glue, S3, Lambda), Git, CI/CD
- **Database and ETL Tools:** MySQL, Oracle, MS SQL Server, MongoDB, PostgreSQL, NoSQL
- **AI/ML Tools:** Agents, OpenAI, MCP, LangChain, Monitoring (Azure Monitor, CloudWatch)

Education

California State University Long Beach Aug. 2021 – May. 2023

Master of Science in Computer Science

Long Beach, CA

Gujarat Technological University

Jul. 2016 – Aug. 2020

Bachelor of Technology in Computer Engineering

Ahmedabad, India

Projects

Feature Prioritization Platform

- Deployed Python-based ML model for analyzing 1.2M+ user events to **score feature impact**, improving prioritization
- Reduced manual analysis time by 70% with **model integration** into Power BI dashboard and Azure Synapse backend
- Increased cross-team alignment by 25%, conducted 20+ interviews and **telemetry reviews** to define MVP scope
- Led **A/B testing** across 3 product teams, validating model-driven decisions that boosted feature adoption by 22%

Service Discovery System

- Built AWS EKS-based Consul system with **Terraform**, cutting service detection time by 50% and ensuring redundancy
- Implemented **Kubernetes** clusters with Helm for Nginx reverse proxy, enhancing backend communication
- Orchestrated multi-zone VPC setup with AWS CDK in **Python** and **Ansible**, ensuring 99.9% configuration accuracy for Linux/Unix-based distributed systems and reducing provisioning time by 40%
